

# XPATH • CSS • DOM • SELENIUM

# Rosetta Stone and Cookbook

Sprinkled with Selenium usage tips, this is both a general-purpose set of recipes for each technology as well as a cross-reference to map from one to another. The validation suite for this reference chart (<http://bit.ly/gTd5oc>) provides example usage for each recipe supported by Selenium (the majority of them).

| Category  | Recipe   | XPath (1.0 – 2.0)  | CSS (CSS1 – 3)  | DOM   | Selenium   |
|---|--|--|---|---|--|
| General   | Whole web page   | xpath=/html  | css=html  | document.documentElement  | NA   |
|   | Whole web page body  | xpath=/html/body   | css=body  | document.body   | NA   |
|   | All text nodes of web page                                     | //text()   | NA  | NA  | NA   |
|   | Element <E> by absolute reference                              | xpath=/html/body/.../.../.../E                                   | css=body>...>...>...>E  | document.body.childNodes[j]...childNodes[j]   | NA   |
| Tag   | Element <E> by relative reference                              | //E  | css=E   | document.gEBTN('E')[0]  | NA   |
|   | Second <E> element anywhere on page                            | xpath=//E[2]   | NA  | document.gEBTN('E')[1]  | NA   |
|   | Image element  | //img  | css=img   | document.images[0]  | NA   |
|   | Element <E> with attribute A                                   | //E[@A]  | css=E[A]  | dom-for each (e in document.gEBTN('E')) if (e.A) e  | NA   |
|   | Element <E> with attribute A containing text 't' exactly       | //E[@A='t']  | css=E[A='t']  | NA  | NA   |
|   | Element <E> with attribute A containing text 't'               | //E[contains(@A,'t')]  | css=E[A='*t*']  | NA  | NA   |
|   | Element <E> whose attribute A begins with 't'                  | //E[starts-with(@A,'t')]   | css=E[A^='t*']  | NA  | NA   |
|   | Element <E> whose attribute A ends with 't'                    | //E[ends-with(@A,'t')]  ◀OR▶                                     | css=E[A\$='*t*']  | NA  | NA   |
|   | Element <E> with attribute A containing word 'w'               | //E[substring(@A, string-length(@A) - string-length('t')+1)='t'] | NA  | NA  | NA   |
|   | Element <E> with attribute A matching regex 'r'                | //E[matches(@A,'r')]   | css=E[A~='w']   | NA  | NA   |
|   | Element <E1> with id I1 or element <E2> with id I2             | //E1[@id=I1]   //E2[@id=I2]                                      | NA  | NA  | NA   |
|   | Attribute  | Attribute A of element <E>                                       | //E/@A  [Se: css=E@A]   | NA [Se: css=E@A]  | document.gEBTN('E')[0].getAttribute('A')  [Se: document.gEBTN('E')[0]@A] |
| Attribute A1 of element <E> where attribute A2 is 't' exactly |  | //E[@A2='t']/@A1  [Se: //E[@A2='t']@A1]                          | NA [Se: css=@A]   | NA  | NA   |
| Attribute A of element <E> where A contains 't'               |  | //E[contains(@A,'t')]/@A  [Se: //E[contains(@A,'t')@A]           | NA [Se: css=E[A2='t']@A1]   | NA  | NA   |
| Element <E> with id I   |  | //E[@id=I]   | css=#I  | document.gEBI('I')  | id=I   |
| Id & Name   | Element with id I  | //*[@id='I']   | css=#I  | document.gEBI('I')  | name=N   |
|   | Element <E> with name N  | //E[@name='N']   | css=E[name=N]   | document.getElementsByName('N')[0]  | name=N   |

| Dynamic   | Cell immediately following cell containing 't'                 | //td[preceding-sibling::td[contains(.,'t')]]                     | css=E:disabled  | NA  | NA   |
|   | User interface element <E> that is disabled                    | //E[@disabled]   | css=E:disabled  | NA  | NA   |
|   | User interface element that is enabled                         | //*[not(@disabled)]  | css=E:enabled   | NA  | NA   |
|   | Checkbox (or radio button) that is checked                     | //*[checked]   | css=E:checked   | NA  | NA   |
|   | Element being designated by a pointing device                  | NA   | css=E:hover   | NA  | NA   |
|   | Element has keyboard input focus                               | NA   | css=E:focus   | NA  | NA   |
|   | Unvisited link   | NA   | css=E:link  | NA  | NA   |
| Visited link  | NA   | css=E:visited  | NA  | NA  |  |
| Active element  | NA   | css=E:active   | NA  | NA  |  |

## LEGEND

- XPath
  - CSS
  - DOM
  - Selenium
- 
- Selenium-only variation
  - Not supported by Selenium
  - Space character
  - expression CSS3 or XPath 2.0

DOM abbreviations:  
gEBI getElementById  
gEBTN getElementsByTagName

Simple-Talk <http://bit.ly/gTd5oc>.

**Indexing (all):** XPath and CSS use 1-based indexing; DOM and Selenium's table syntax use 0-based indexing.

**Prefixes (all):** `xpath=` required unless expression starts with `//` • `dom=` required unless expression starts with "document." • `css=` always required • `identifier=` never required.

**Cardinality (Selenium):** XPath and CSS may specify a node set or a single node; DOM must specify a single node. When a node set is specified, Selenium returns just the first node.

**Content (XPath):** Generally should use `normalize-space()` when operating on display text.

**DOM** has limited capability with a simple "document..." expression; however, arbitrary JavaScript code may be used as shown in this example.

**CSS** does not support qualifying elements with the `style` attribute, as in `div[style="border-width"]`.

**Selenium** uses a special syntax for returning attributes; normal XPath, CSS, and DOM syntax will fail.

**CSS:** The `css2:contains` function is *not in CSS3*; however, Selenium supports the superset of CSS1, 2, and 3.

**DOM:** `firstChild`, `lastChild`, `nextSibling`, and `previousSibling` are problematic with mixed content; they will point to empty text nodes rather than desired elements depending on whitespace in web page
